**UNIVERSAL
INVENTIONS
CHARTER**

ALPHAPOLIS
.org

Version 1.0

A charter of principles, commitments and objectives.

In progress

A common construction for a global efficiency

You will find below some angles of reflexion on the points which must contain the future Charter.

Some entry points

Share

To allow a diffusion to all humanity

A Universal invention deposit must be able to, in compliance with the conditions of the charter, be used all over the world.

- The capabilities of digital networks and new production machines (3D printers) will make it possible to achieve this goal.

Guarantee

A fair return to creators and inventors

The counterpart of making all inventions available is the fair harvesting of the ideas contributed by the applicants of the new patents.

- The possibility of immediate payment for each production of goods or delivery of services will allow a guaranteed remuneration to innovators and creators.

Norms

A clear and visible system

In order to allow everyone (inventors, producers, consumers) to situate themselves in this configuration, the payment mechanisms, minimum or maximum thresholds, percentages over time, will be known by all.

- As experience is gained, in the framework of the greatest possible consensus, the choices will be refined to be more and more relevant

Universality

Common languages

Whether for the improvement of innovations and processes or for the manufacture of goods and services, true universal languages will have to be generated and used to describe and realize universal inventions.

- These languages will be understood by all human beings and by robots and production tools. The Charter will express this desire as a foundation stone for the proposed system.

Encourage

Vocations

Inventions are like a dynamic that you have to make sure works all the time. This is why it is important to train and help future generations of inventors.

- The Charter will confirm the vocation of the initiative to transmit, by all possible means, the taste for invention to the greatest number.
- The organization of competitions or research themes will also be part of these means deployed.

Being at the forefront

Human and technological

The ambition to use the best methods of joint work and creativity will be affirmed.

So that the innovations are as relevant as possible. And that they can, by the most powerful technical means, be diffused to the greatest number.

- The objective of participating in the development or improvement of production tools for sharing universal inventions will be mentioned.

Benevolence

Listening and studying

Achieving the ambitions expressed in the Charter can only be done through the fulfillment of human virtues. Among these, there is the listening and study of any project that will be proposed as Universal Inventions.

- A new inventor will one day become an accomplished innovator if we know and want to accompany his first steps.

Patience

Rome was not built in a day

It is not possible to achieve everything at once on all terrains and subjects.

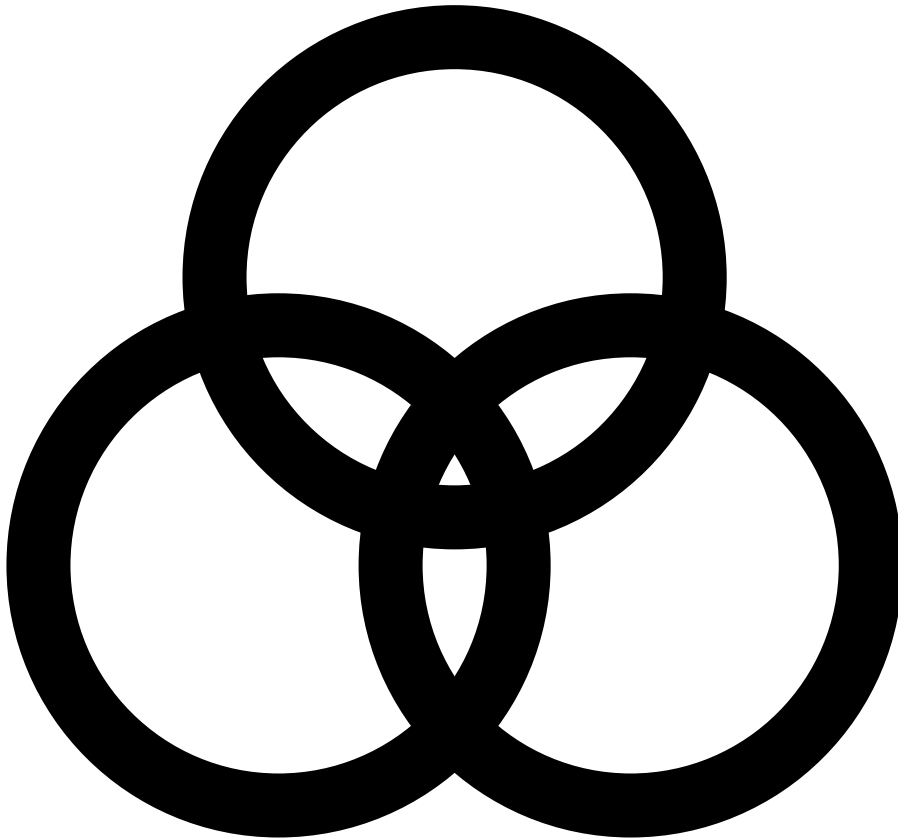

- The creation and diffusion of Universal Inventions will be done step by step.

Loyalty

Respecting its commitment

The acceptance of the Charter will imply a respect and a loyalty with regard to its contents.

- In case of bad practices, the people behind them will be permanently excluded from the use of Universal Inventions.

Do you want to participate in the development of the charter?

Tell us your wish by filling out this form

Thank you in advance
