

You will find on this page some examples of inventions that are so innovative, so ingenious and clever and sometimes elegant, that they should be made available to Humanity within the framework of use developed in the [Universal Inventions](#) proposal.

Warnings and precautions. If these inventions are proposed as examples of Universal Patents that can be put at the service of all, it is because they are not yet within this framework. And that the owners of the intellectual property or the inventors and discoverers have not, for the moment, wished to make their innovations available in this form.

The mention of this potentiality does not reflect their choices and decisions. It is up to them and them alone to choose what they think is best to exploit their advances. Nevertheless, for the greater Common Good, and also for the inventors and pioneers, the diffusion of their work in the form of a Universal Patent seems to us to be the most appropriate.

## **ENERGIES**

To exploit the creation of electricity in rivers, streams and even brooks is possible with this innovative turbine concept. This [is blue](#) (in French) electricity like water!
