

## The 9 fundamental principles

### **Every new invention belongs to the humanity.**

Humanity must benefit as soon and as well as possible from the advances made by a person.

[I want to participate in the initiative](#)

## **The true discoverers and inventors receive their fair share.**

In return for the use of their ideas, methods, techniques and processes by Humanity, the true inventors and creators receive their fair share of returns, financial or otherwise,

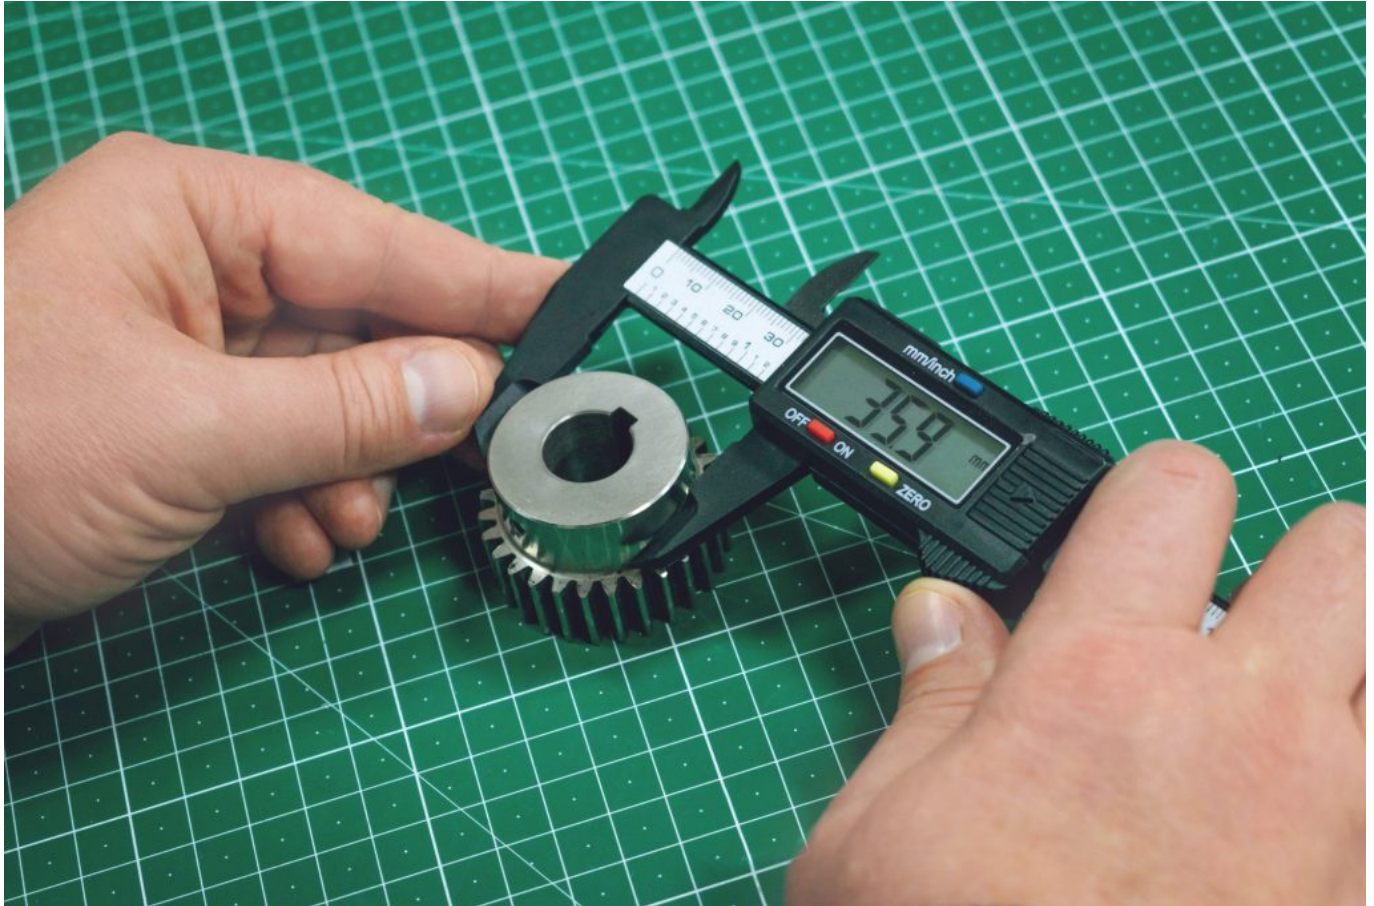

[I want to participate in the initiative](#)

## **The height of these shares is standardized.**

To facilitate the use of Universal Inventions, the percentage of royalties that can be redistributed is set by the Common Good organization managing them. They are framed with minimum and maximum limits by category and theme of invention.

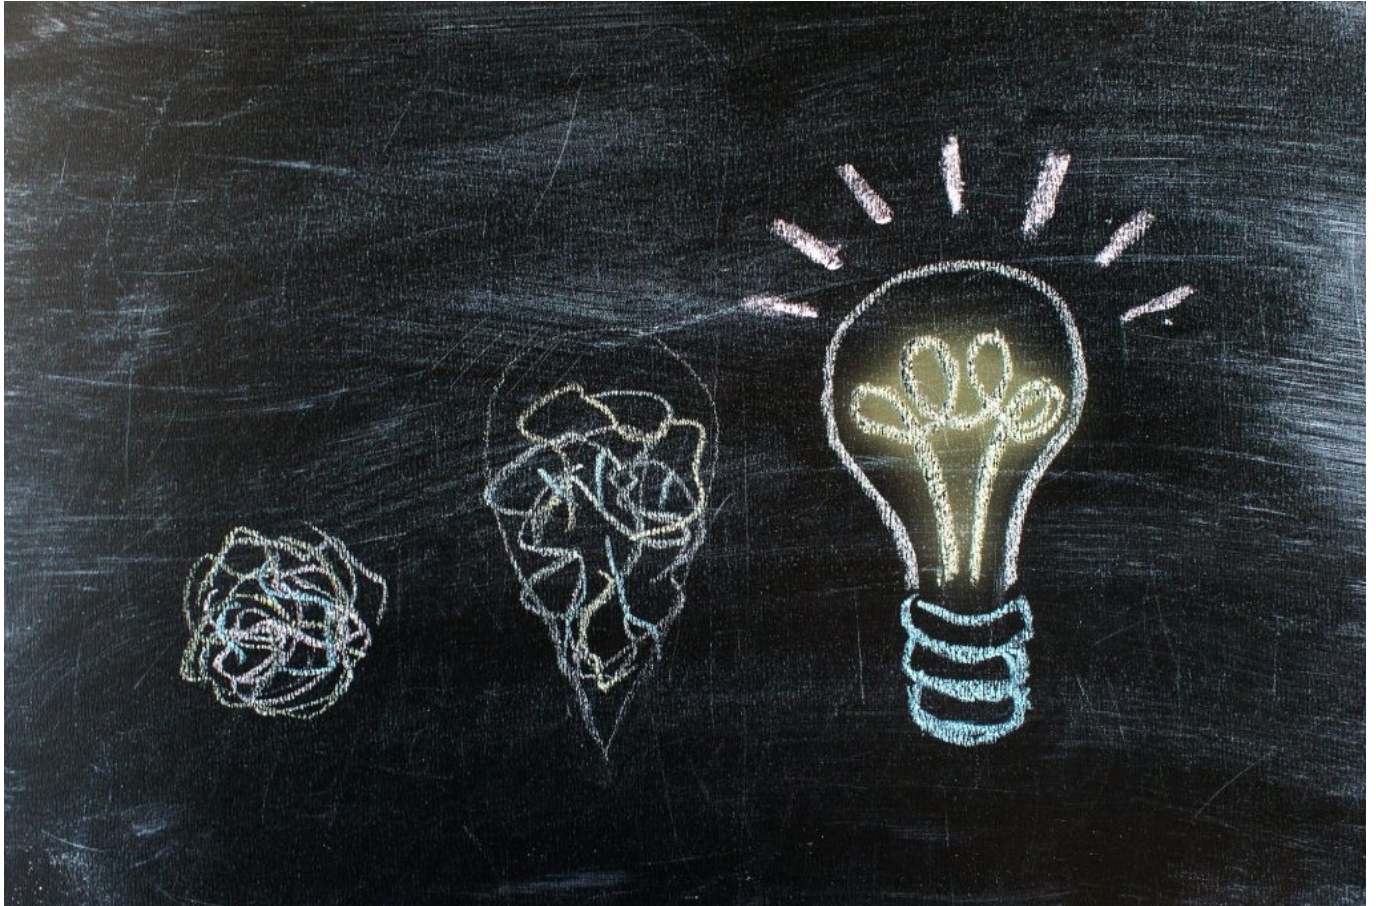

[I want to participate in the initiative](#)

## **These shares are mandatory and proportional.**

They depend on the category of the invention, its use and its impact on humanity.

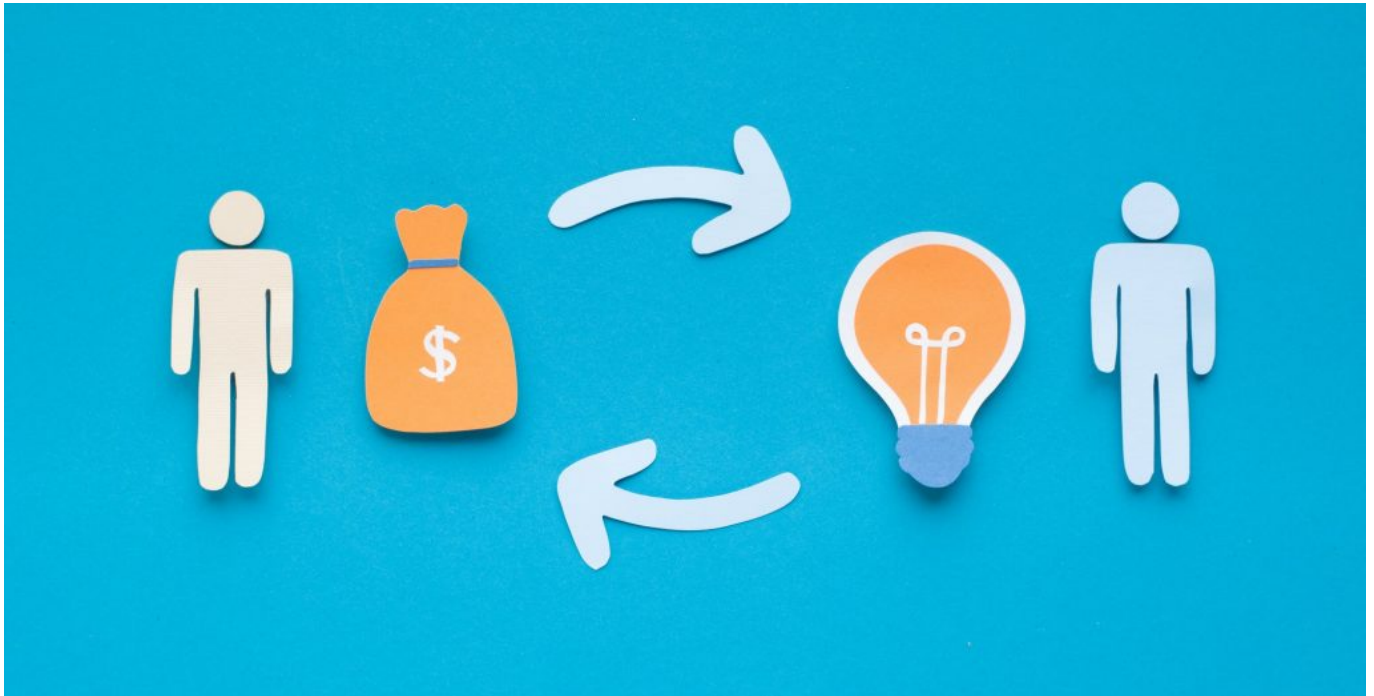

[I want to participate in the initiative](#)

## **An invention can be constantly improved.**

For the greater good of all, inventions can be improved constantly and at any time.  
By the original inventors or new people.

[I want to participate in the initiative](#)

## **Improvements are rewarded by the substitution system.**

In order to allow all those involved in Universal Inventions, both the original creators and those who improve them, a progressive royalty substitution system will be put in place.

## **Inventions are described in a Universal Language of Knowledge.**

To be able to collaborate well, you have to share the same language. It is necessary to formalize the inventions in a specific language, adapted to the needs of restitution of the knowledge contained in the shared processes and ideas.

[I want to participate in the initiative](#)

## **A Universal Common Good structure organizes and oversees these mechanisms.**

An international non-profit structure will aim to make all inventions available to all mankind as soon as possible, at the lowest cost. While giving the deserved and fair shares to the inventors and creators.

## **FAQ's**

Some insights into the Universal Invention System

### **Isn't this utopian?**

Yesterday's utopia is today's reality.

We live in a world that would have appeared completely utopian to a person living in the 19th century. Not to mention those of previous centuries.

So the utopia of today will be our reality of tomorrow.

### **In what areas would the Universal Inventions be focused?**

At first, on everything that concerns the production of physical objects and computer code.

### **What links between new technologies & universal inventions?**

Like any technology, new equipment, 3D printers of all types, fiber optics, satellites, and soon quantum or photonic computers, need to be put at the service of humans. But they have two unprecedented characteristics in common.

On the one hand their extraordinary capacities of action and treatment. And on the other hand, as the Internet was, they are designed to work in network by using the strength of the collective for the benefit of all.

The Universal Invention System will use their powers to spread innovations to all of humanity. And to allow inventors to receive their fair share.

### **What are the first steps of the initiative?**

The first one was the formalization of the concepts that you can find written in the book "The Universal inventions".

The second is the one you are seeing right now, the one of the diffusion of principles and concepts.

The third, which is underway, is the administrative and legal formalization of the initiative.

### **How can I participate or support the initiative?**

There are several ways.

First of all, there is the one you are making right now by coming to inform yourself. If the proposal seems relevant to you, you can relay it by communicating the ideas it contains through your social networks or other distribution levers.

Finally, you can fill out the participation form to offer your volunteer services to the

action.

**I have an idea or a method that I would like to put at the disposal of humanity. What can I do?**

If you want a guaranteed return on your contributions, you will have to be patient for some time.

Disseminating Universal Inventions to as many people as possible is the second organizational step of the project. The third, as mentioned above, is the legal structuring of the project.

Until this is done, save your ideas or protect them in some other way before we can guarantee a fair return for your participation.

If you wish to give Humanity the benefit of your advances without receiving any financial compensation, but being credited with the invention or remaining anonymous, you can do so now through the contact form.

Thank you in advance for sharing.

**Nature's Inventions belong to all Humanity**

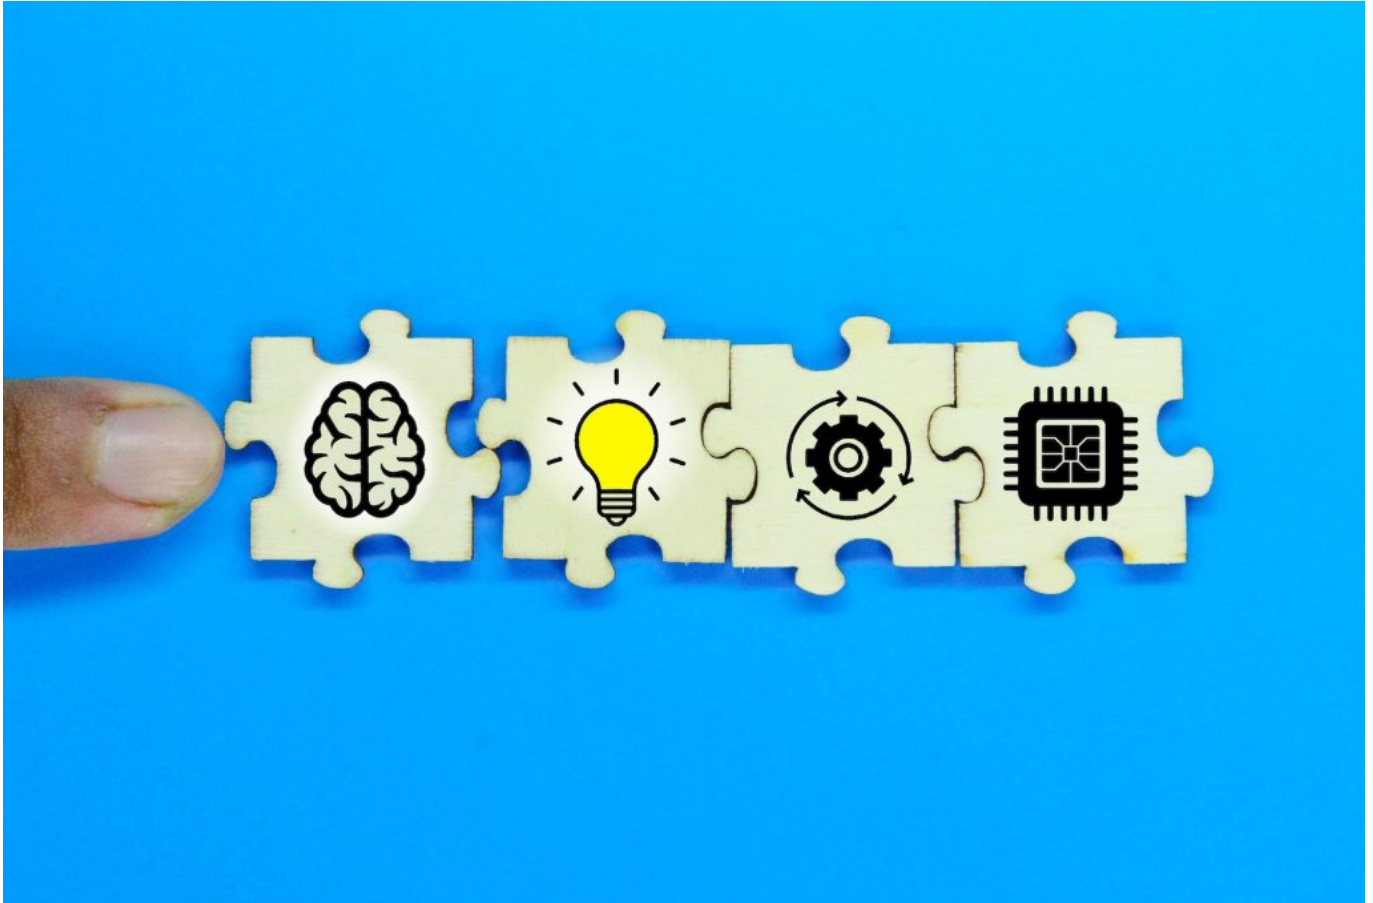

24/01/2023

What has been developed through millennia of testing, or even more, through variations, deviations, what constitutes all forms of life today, whether as plants or

animals in the broadest sense, cannot belong to...
